Profile

Undergraduate B.Tech. student specializing in Computer Science (Cyber Security) with research interests in Artificial Intelligence, Cybersecurity, Intelligent Agent Systems, and Digital Forensics. Passionate about building intelligent software systems and pursuing long-term research in AI-driven security and autonomous systems.

Research Interests

Artificial Intelligence, Cybersecurity, Intelligent Agent Systems, Machine Learning for Security, Digital Forensics, Human-Computer Interaction, Intelligent Investigation Systems, Intelligent Robotics & Embedded Systems (Long-term).

Education

SRM Institute of Science and Technology, Kattankulathur

B.Tech. in Computer Science and Engineering (Cyber Security)

Aug 2025 – Expected Jul 2029

CGPA: 7.8/10

Relevant Coursework: Programming for Problem Solving, Object-Oriented Programming, Calculus & Linear Algebra, Semiconductor & Computational Methods, Electrical & Electronics Engineering.

Research Experience

AI & Cybersecurity Research Intern

SMART Policing Lab, Rashtriya Raksha University, Ahmedabad

Jun 2026 – Jul 2026

- Conducted research on cybercrime trends using NCRB reports and smart policing literature.
- Contributed to the design, architecture planning, and implementation strategy of **CrimeLens AI**, an AI-assisted cybercrime investigation platform.
- Used AI development tools to accelerate software implementation while independently planning workflows, validating features, reviewing implementation, and ensuring alignment with research objectives.
- Prepared technical reports, presentations, and documentation for project reviews.

Projects

CrimeLens AI

AI-assisted investigative platform for cybercrime analysis, evidence management, and intelligent case summarization developed during the RRU internship.

- Designed system workflow and feature planning.
- Planned implementation phases and validated AI-assisted code generation.
- Technologies: Next.js, React, PostgreSQL, Prisma, Docker.

Robin AI (Ongoing)

Research-oriented desktop AI assistant with wake-word activation, voice interaction, local execution, and modular agent architecture.

- Technologies: Python, PySide6, OpenWakeWord, NVIDIA NIM, Gemini API.

ThreatSight

Desktop phishing URL analysis tool using heuristic techniques.

Repository: github.com/Anonadvait/ThreatSight

Technical Skills

Languages: Python, Java, C++, JavaScript, HTML, CSS

Frameworks: React, Next.js, FastAPI, Tailwind CSS, Node.js

AI: LLMs, Prompt Engineering, Multi-Agent Systems, RAG, NVIDIA NIM, Gemini API

Cybersecurity: Cybercrime Analysis, Phishing Detection, Secure Software Development, Threat Analysis, Digital Forensics (Foundational)

Databases: PostgreSQL, SQLite

Tools: Git, GitHub, Docker, Linux, VS Code, Prisma

Certifications

- Cybersecurity Certification – Tech Mahindra Foundation (Skill India Digital Hub)
- Web Design & Development – NSDC
- Cybersecurity Research Internship – Internsforge

Languages

English (Fluent), Hindi (Native), Gujarati (Native), German (Beginner), Mandarin Chinese (Beginner)

Long-Term Goal

To conduct research at the intersection of Artificial Intelligence, Cybersecurity, and Intelligent Embedded Systems, with the long-term objective of developing intelligent autonomous software and hardware systems.
